Quick Start Guide

0 Disclaimer

Each electronic kit from our store is inspected for appearance and basic functionality before shipping. Please **power it on and test it as soon as you receive it** and confirm that it works properly before installing it onto the structure. Damage caused by installing without testing, or by improper installation or usage environment, is not covered by after-sales service.

1 Power On/Off & Charging

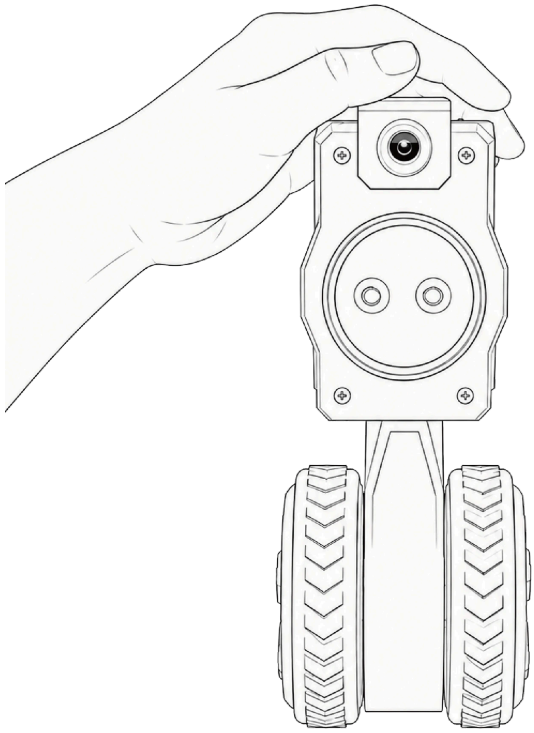

To ensure the best first experience, we recommend fully charging the battery first. During charging, you can check the battery level via the power indicator; when fully charged, the power indicator turns green.

2 Power On & Balance Init

As a balancing robot, the power-on posture is critical: 1. Manual start: place Wenwen vertically on a flat desk and gently hold it upright. 2. Toggle switch: turn on the power. 3. Wait for calibration: after the screen lights up, hold it steady for about 2-3s until the IMU initializes. 4. Release: when you feel a slight torque feedback from the wheel motor (as if "resisting" your finger), release. Wenwen auto-enters self-balancing standby.

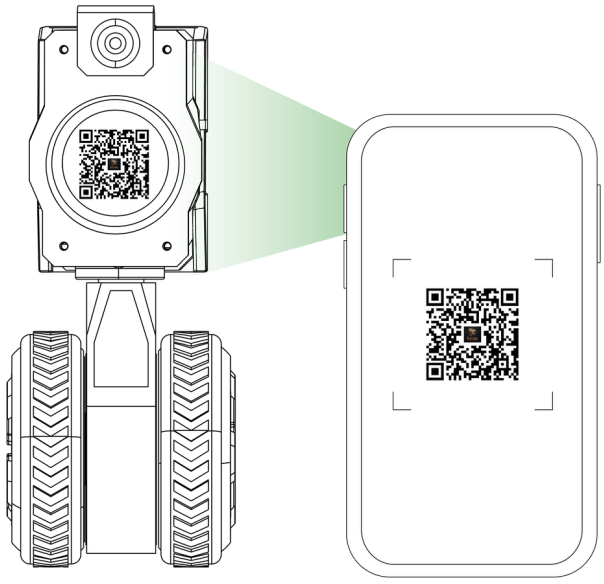

> **Notice:** Keep fingers away from the wheel hub while holding it.

3 Connect RIG-Hover

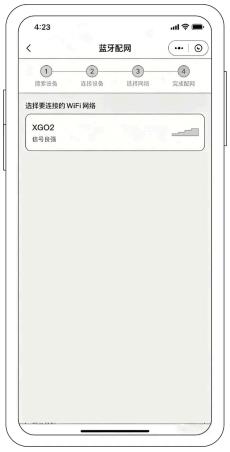

After power-up, follow the steps below to connect Wenwen:

1. Download the Luwubot app: for iPhone, search for "Luwubot" in the App Store and install it; for Android, search for "Luwubot" in Google Play and install it.
2. Open the app and follow the in-app instructions to complete network pairing. Note: after pairing, the robot reboots and loses balance, so hold it to avoid damage.

4 Select & Configure WiFi

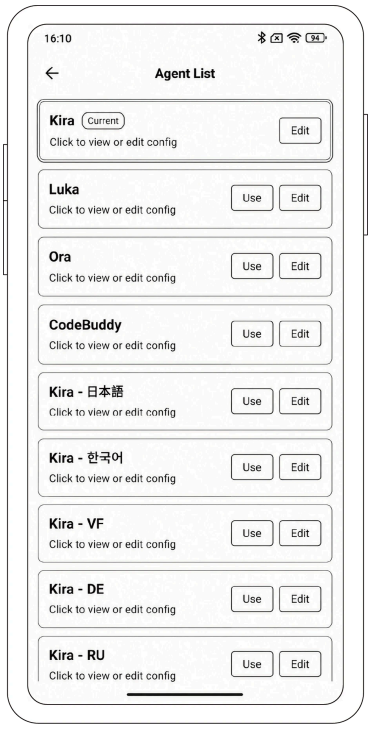

Select a 2.4G network from the WiFi list (note: 5G is not supported yet), manually enter the password and tap Start Pairing.

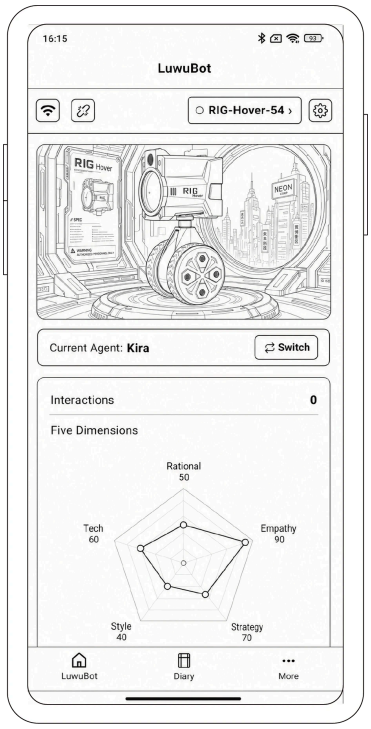

5 Cyber Soul Development

Connect your Wenwen and witness its evolution from machine to "cyber life".

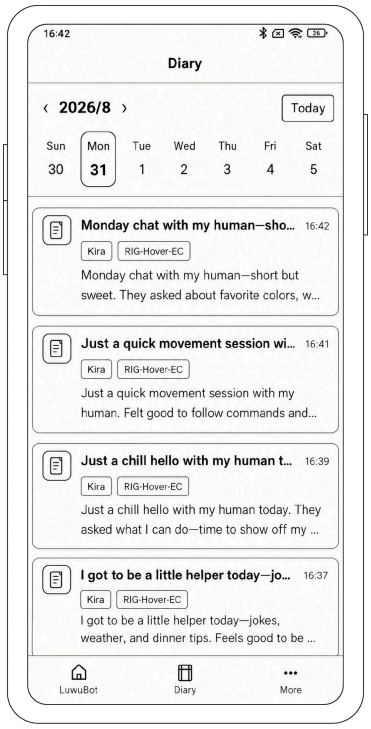

Agent Setup

Through the "Xiaolu Classmate" mini program, you can customize its personality, dialogue style and voice traits.

Mood & Growth

During daily interactions, view Wenwen's "Five-Dimension Personality" panel in the mini program in real time and witness its personality evolve.

Mood Diary

Based on interaction frequency and content, the system auto-generates an exclusive mood diary, recording this cyber life's daily thoughts.

6 Interactive Commands

After boot and online, wake the robot with the wake word "Xiaolu Classmate". Try these command words!

Forward | Head Left | Backward | Head Right | Turn Left | Head Center | Turn Right

Notice: Keep fingers away from the wheel hub while holding it.
