RIG-Puppy · Lulu

# Desktop Cyber Life

User Guide

From algorithms to living entities · Start your desktop cyber evolution

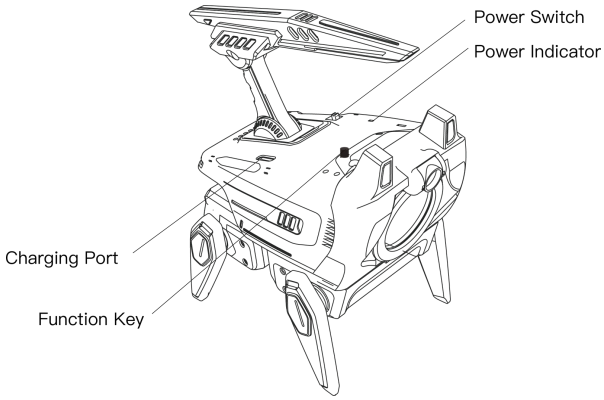

## Quick Start Guide

### 0 Disclaimer

Each electronic kit from our store is inspected for appearance and basic functionality before shipping. Please **power it on and test it as soon as you receive it** and confirm that it works properly before installing it onto the structure. Damage caused by installing without testing, or by improper installation or usage environment, is not covered by after-sales service.

### 1 Power On/Off & Charging

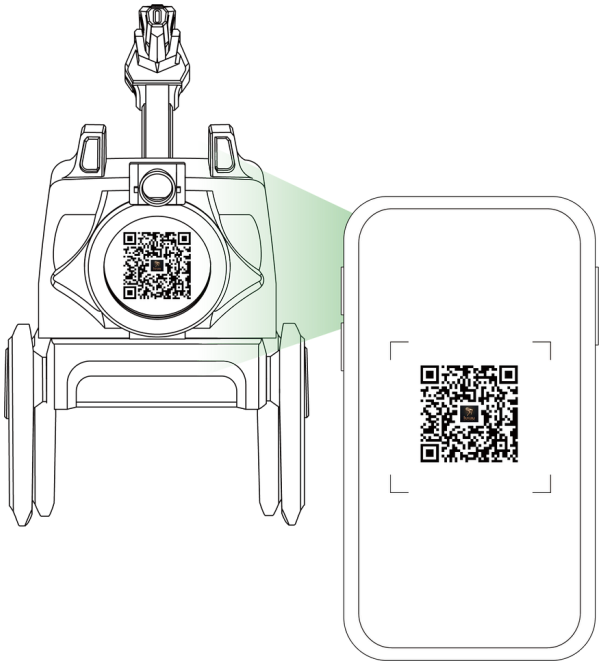

To ensure the best first experience, we recommend fully charging the battery first. During charging, you can check the battery level via the power indicator; when fully charged, the power indicator turns green.

## 2 Connect RIG-Puppy

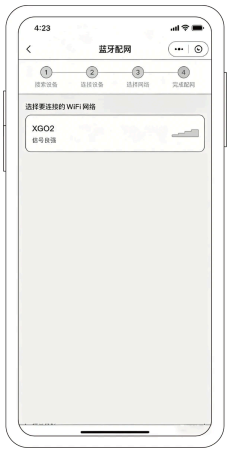

After power-up, follow the steps below to connect your RIG-Puppy:

1. Download the Luwubot app: for iPhone, search for "Luwubot" in the App Store and install it; for Android, search for "Luwubot" in Google Play and install it.
2. Open the app and follow the in-app instructions to complete network pairing.

## 3 Select & Configure WiFi

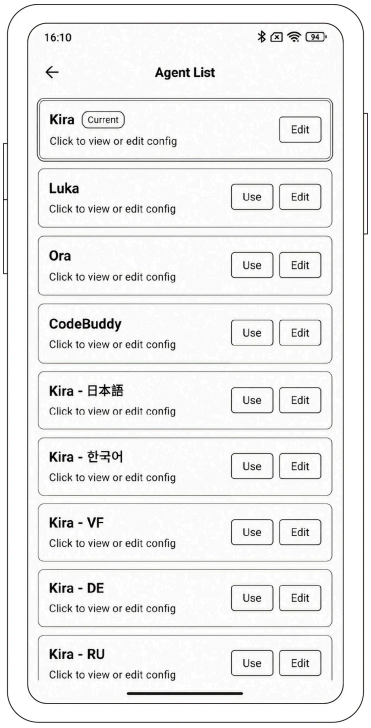

Select a 2.4G network from the WiFi list, manually enter the password and tap Start Pairing.

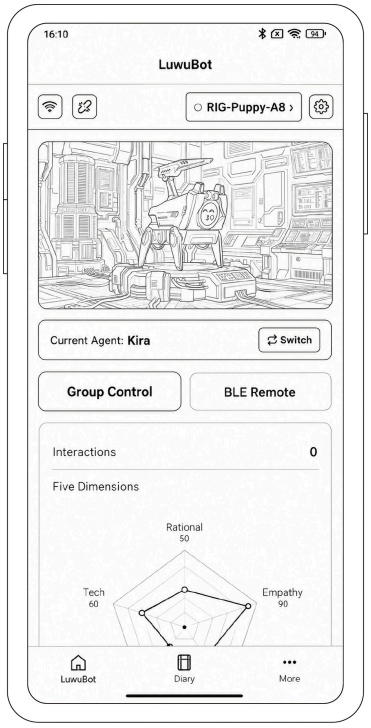

## 4 Cyber Soul Development

Connect your Lulu and witness its evolution from machine to "cyber life".

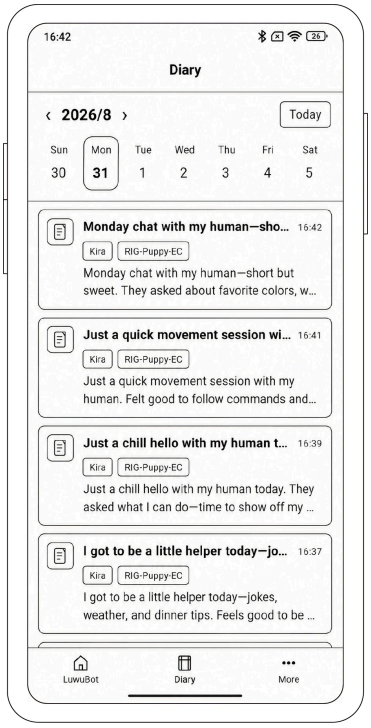

### Agent Setup

Through the "Xiaolu Classmate" mini program, customize Lulu's personality, dialogue style and voice traits, and switch among multiple built-in agents with one tap.

### Mood & Growth

During daily interactions, view Lulu's "Five-Dimension Personality" panel in the mini program in real time and witness its personality evolve.

### Mood Diary

Based on interaction frequency and content, the system auto-generates an exclusive mood diary, recording this cyber life's daily thoughts.

## 5 Interactive Commands

After boot and online, wake the robot with the wake word "Xiaolu Classmate". Try these command words!

Forward | Stretch | Swim | Pee | Hug | Backward | Shake Head | Squat | Beg | Turn Left | Sway Left-Right | Greet | Sit | Turn Right | Rock Front-Back | Angry | Act Cute

## 6 How to Calibrate

After firmware update, the device enters calibration mode automatically on power-up. If motion angle drift occurs, triple-tap the top button to enter calibration manually. On entering calibration, servos auto-center and enter torque-release state (legs swing freely). Then place the device on a flat desktop, adjust to the standard posture, and triple-tap the top button again to complete calibration.

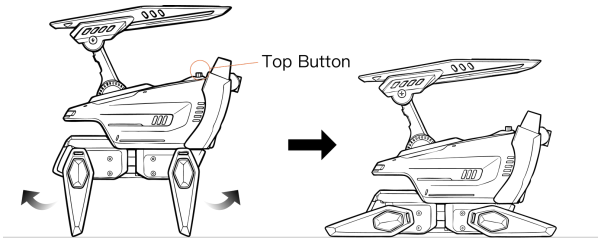

Fig. 1 Fig. 2

**Notice:** Calibration is entered via the top button triple-tap or automatically after firmware update.
